

## Introduction:

This document describes and links to the user stories from OpenMRS that the OpenFOSS team comprising of the following individuals worked on:

- William Hause
- Jonathan Grant
- Said Robley
- Gideon Nyamachere

## License:

OpenMRS code is subject to the terms of the Mozilla Public License, v. 2.0. If a copy of the MPL has not distributed with this file, You can obtain one at <http://mozilla.org/MPL/2.0/>. OpenMRS is also distributed under the terms of the Healthcare Disclaimer located at <http://openmrs.org/license>.

Therefore, you are free to make modification to the project files as far as the terms of the license permit.

## Contents:

### 1. The Code-Contributions directory:

Contains the directories of the users stories that we worked on throughout the semester. In the directory we have the following directories:

- STAND-79: Contains users story STAND-79 which dealt with incorrect documentation
- TRUNK-3401: Dealt with assigning providers if a user exists.
- TRUNK-5331: Resolves a bug where cohorts intersect.
- TRUNK-5382: adds functionality by allowing users to filter retired members.

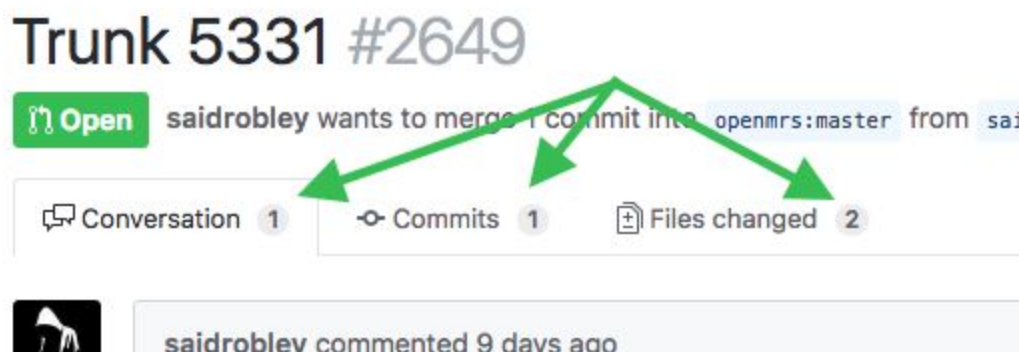

Within each of these directories, there are two main directories with the following functions:

- Jira Ticket: which contains a static html of the ticket for the OpenMRS issue tracker.
- Pull Request: containing a static html of the GitHub Pull Request for the user story.

Within each of these directories there exists a single txt file with the diffs of the code contributed.

Any static html files contain the information relevant to the contribution. However external links still exist within the files. These external links are not indicative of the team's contribution. As an example

within the Pull Request Directories the 'Conversation', 'Commits', and 'Files changed' tabs function statically.

## 2. Backlog-Contributions

Contains various issues in the OpenMRS backlog that we contributed to without having a Github Pull Request assigned for them. Each of these html files contains a static html of the ticket for the OpenMRS issue tracker. If the ticket itself is not evidence of Value added, and rather a contribution inside of the ticket is evidence of value an image containing "relevant\_contribution" will be included to provide context.

- TRUNK-5391: This is a new user story we created to address a bug that we discovered.
- TRUNK-5372: We recommended that this user story is related to another issue and needed more assessment.
- TRUNK-5025: We recommended that more tests were needed since it was not addressing all the paths.
- TRUNK-188: We recommended that this deprecated issue be closed
